EXCALIBUR  
AUTOMATIC SKELETON

In addition to its multiple motivations for pursuing its victorious vanguard charges into the skeletonwork kingdom, Manufacture Roger Dubuis finds in these impressive feats of miniaturisation – much like its ground-breaking micro-rotor also featured in this model – a perfect opportunity to reveal the prestigious finishes that earn it 100% Poinçon de Genève certification. All faces of the 167 parts composing the new in-house RD820SQ automatic skeleton calibre are individually finished. Despite the constraints naturally entailed by the automatic movement, the Excalibur Automatic Skeleton maintains its architectural and powerful design.

The 42 mm pink gold case and bezel frame a spectacular 3D effect created by raising the famous skeleton 'star shape' and playing with the height of the openworked micro-rotor. The latter embodies a classic paradox of the kind that Roger Dubuis loves to explore, since the weight of a micro-rotor is generally considered a positive aspect and skeletonising it would thus appear counter-intuitive in technical terms. This element alone thereby serves as a powerful token of the degree of maturity achieved by Roger Dubuis, acknowledging no limits and unafraid of apparent 'heresies'. In 2005, it did away with the central rotor while achieving equivalent winding power; and ten years later, in 2015, it rolls out the first skeletonised automatic Roger Dubuis movement with micro-rotor.

PROMESSE 10199

An iconic timepiece encapsulating the Baume & Mercier know-how, this Promesse set with 61 diamonds on a steel 34 mm-diameter case vividly expresses its expertise in the realm of jewelry timepieces. Its intensely feminine natural white mother-of-pearl bezel emphasizes its oval design and enhances the tone of the silver-colored dial with its "drapé guilloché" decor, illuminated by the presence of Roman numerals and diamond-set indexes. Available on a polished stainless steel bracelet, this Promesse plays on its pristine purity to recall the most precious commitments in a woman's life.

## VACHERON CONSTANTIN HARMONY COLLECTION

In tribute to its 260 years of continuous activity, Vacheron Constantin unveils the seven first models of a new collection christened Harmony. Issued in limited editions, these watches feature a cushion shape and a design inspired by a chronograph introduced in 1928. Embodying contemporary reinterpretations of time measurement, five calibers bearing the prestigious Hallmark of Geneva join forces with the art of shapes in creating remarkable sculptures.

### Harmony dual time small model

Caliber 2460DT developed and crafted by Vacheron Constantin  
Mechanical self-winding  
233 parts  
Decorated oscillating weight  
2nd time zone  
18K white gold case, bezel set with 88 diamonds  
Limited edition of 500 watches  
"260th Anniversary" inscription engraved on the back

## PIAGET ALTIPLANO CHRONOGRAPH

On the occasion of the 25th Salon International de la Haute Horlogerie, Piaget presents a new ultra-thin hand-wound chronograph in its iconic Altiplano collection. For the first time, this line with its pure, contemporary attributes is hosting a major horological complication. The Piaget Altiplano Chronograph model sets a new record in the ultra-thin field – a demanding art in which the Maison has consistently excelled since 1957. With its 4.65 mm movement and its 8.24 mm case, this newcomer to the Altiplano range will set a new crowning touch to the already impressive array of Piaget timepieces distinguished by legendary slenderness. ■
